

PRESS RELEASE

Colombes, France, January 25, 2022

ALPI and Rockwell Automation announce their partnership, focusing on including the Allen-Bradley catalogue in Caneco BT

The ALPI Group, European leader for calculation and sizing software for designing electrical installations and Rockwell Automation, world leader in industrial automation and digital transformation, are pleased to announce the signing of their partnership.

This agreement aims to introduce and maintain the Allen Bradley catalogue of electrical equipment in localized versions of Caneco BT, published by ALPI, for the following markets: France, Germany, Belgium, Switzerland, Italy, Spain, Portugal, and Africa.

With this new agreement, ALPI reaffirms its intention to continue developing strategic partnerships with makers of electrical equipment in France and abroad, to offer its customers more choice.

Through this partnership Rockwell Automation intends both to strengthen its position on the market for low voltage components and motor protection in industry, and to provide better support for its end customers' integrators.

Close collaboration between the respective teams made it possible to produce the catalogue to a tight deadline (release on 01/25/2022) while ensuring optimum data quality.

The catalogue covers the majority of the Rockwell Automation offer for circuit-breakers, switches, contactors and thermal relays.

About ALPI

Founded in 1986, ALPI (Applications Logiciels Pour l'Ingénierie - Software Applications for Engineering) is now the European No.1 in automated calculation software for LV electrical installations for the industrial and commercial markets. The company has over 110 employees in 4 countries and achieved sales of €11.3 million in 2020. With 35 years' experience in low and high voltage distribution networks, ALPI's expertise stems from its perfect knowledge of installation standards as well as its special relationships with the major players in the market. ALPI also supports its customers by offering additional services including training, technical support and project support. Today, to meet the major challenges of BIM (Building Information Modelling), ALPI offers solutions that can design and operate electrical installations using digital modelling.
